Recently Frank Wernette, Steve Shaffer, and Rick Soehren have been meeting to discuss potential impacts to agriculture from implementation of ERP actions in the south Delta, and ways to avoid these impacts as ERP actions are selected. One way to accomplish this is to implement actions that meet CALFED ecosystem objectives while allowing ag land to remain in production. There may be existing programs that support ecosystem improvement while maintaining ag production. Wernette and Soehren should be aware of any such programs as ERP actions are selected.

We would like to schedule a meeting to discuss this topic. Potential meeting dates are October 20, 22, 25, 27, or 29. (Soehren and Wernette are available either AM or PM on these dates.)

Please let me know by e-mail your availability during the AM and PM on each of these dates. I will select the best date, arrange a meeting room, and inform all participants. Meeting will probably be 2 hours or less.

Thank you!

Rick Soehren
